- standard
- optional
- ① restricted

### Other options (depending on machine model):

- inflated pressure balloon (soft balloon)
- discharge conveyor for removed skin
- transport roller with coarse or fine tothing
- foot switch for „manual” operation with an open conveyor machine
- turn-around device to skin both sides of flat fish

**CF** = tooth roller with scraper comb

**GF** = freeze drum

**S** = transport roller without grooves, with counter rotating cleaning roller
